Beyond the Garden Gate

Australian Botanical Gardens, Plant Collections and Wild Origins

- clean modern look?
- native colour?
- font similar to website
- not too bright!!

- who? → general public
- what? → 13 interactive visualisations
- why? → understand gardens, collections, conservation
- how? → plantbank, herbarium, seed data (ALA)

Hero / Opening

Beyond the Garden Gate

Plant collections can support research and conservation, while some gardens also educate people about biodiversity.

1. Gardens & Arboreta → 2. Living Collections → 3. Preserved Specimens → 4. Wild Origins

- intro to topic
- background context
- flow of story
- simple illustration? maybe Australia outline?
- keep it clean

Story structure (4 chapters)

1. Australian Gardens & Arboreta
   - where are they?
   - type
   - size
   - context
2. Living Collections (PlantBank)
   - family / genus
   - which plants
   - how many
   - conservation (e.g. myrtaceae)
3. Preserved Specimens (Herbarium)
   - herbarium records
   - not living plants
   - support research
   - education
4. Wild Origins (Seeds)
   - seed accessions
   - collection locations
   - look on grid map?
   - link to conservation

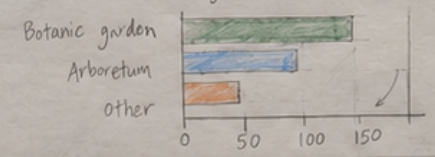

V01 Gardens map (points)

interaction?
- hover
- tooltip?
- filter type?

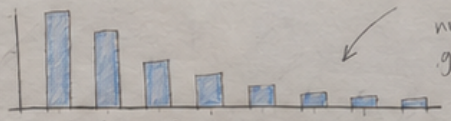

registered gardens + arboreta across Australia

V02 Garden type (bar)

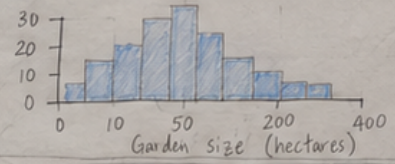

compare type and count

V03 State (bar)

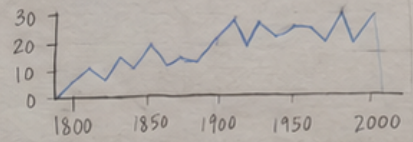

number of gardens in each state

V04 Garden size (histogram)

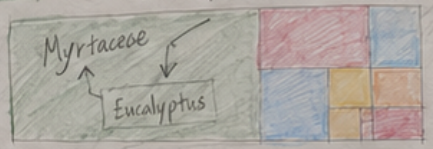

distribution of garden size

V05 Establishment time (line)

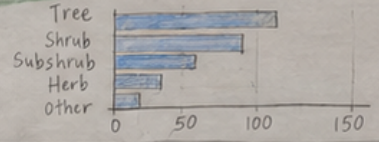

when gardens were established

V06 Family composition (treemap)

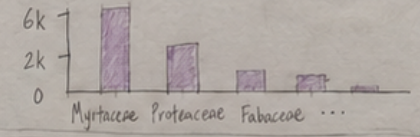

Myrtaceae largest family in PlantBank
Myrtle rust context (45 of 49 priority species in survey)

V07 Garden forms (bar)

growth form distribution in living collections

V08 Herbarium records (bar)

Kings Park herbarium vouchers (not living plants)

V09 Herbarium by state (map)

- more records
- fewer records

Where specimens were collected (across Australia)

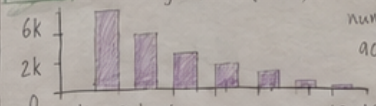

V10 Seed origins (hexbin map)

100 km grid →

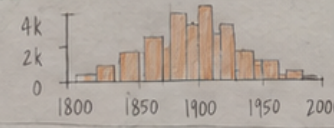

shows where seeds were collected (wild origins)

V11 Seed by state (bar)

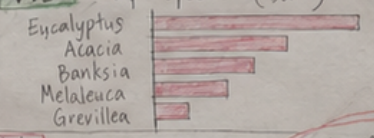

number of seed accessions in each state

V12 Collection time (histogram)

when seeds were collected

V13 Top species (bar)

most common species in seed accessions

Design notes:
- consistent colours with website
- simple clean layout
- clear titles + annotations
- make it look like a story (flow)

Technical / spec:
- Vega-Lite
- 13 charts
- 3 map types → point, choropleth, state, hexbin
- interactivity → hover, tooltip, filter
- responsive layout (desktop)

Data sources:
- PlantBank (living collections)
- ANBG / Kings Park herbarium
- ALA (seed accessions)

→ mention data limitations!
- not all gardens
- not all collections
- different datasets
- INDICATIVE only

QA checklist:
- [x] 13 visualisations
- [x] 3 different map types
- [x] interactive + working
- [x] clear annotations
- [x] sources cited
- [x] story follows who/what/why/how

Final website
→ clean this up
→ consistent style
→ export paper after finishing
